

Connect everything: Save 80% on satellite connectivity for devices

Things have changed: satellite IoT just got smart

Right now, the greatest barrier to IoT remains the cost of deploying and connecting a network, especially for remote industries such as mining, maritime and farming. Thanks to Fleet, things have changed in a big way.

80% reduction in satellite costs with Fleet's solution

Fleet have reinvented the way we use satellite to connect assets on the ground, opening up remote areas to the massive and far-reaching commercial benefits of large-scale IoT deployments.

The Portal: powering satellite IoT with Edge Computing

The Portal is Fleet's plug-and-play edge computing device incorporating a satellite modem and LoRa gateway. It selects and compresses key data for secure transfer, providing global, low-cost, low-power IoT.

KEY APPLICATIONS

- Precision Agriculture
- Smart Oil & Gas
- Logistics & Transport

ADVANTAGES

- Remote region coverage
- Ultra low-cost data
- Small, low-cost antenna
