## Explore. Inspire. Transform.

The OEEC 2018 theme presents three calls to action fitting the industry. With "Explore", think of exploration taking place for all sources of energy needed to meet global energy demand growth. To fulfill this mission the industry needs to retain and attract analytical, creative and adaptable minds. So with "Inspire", think both of the energy professionals already dedicating their careers to providing energy and of the people - in particular the next generation - that are taking the first step in the industry. An industry that has changed markedly because of a downturn in oil & gas on the one hand and strong incentives for offshore renewables on the other. With "Transform" think of the changes in global energy demand and supply and the adjustments needed from industry to keep at pace with these shifts.
